

X-Edit for Windows® Release History

Version 1.0

Build: 1210

Developer: Josh Kapp

Release date: 4/25/03

Comments: Initial product release

Version 1.01

Build: 1220

Developer: Josh Kapp

Release date: 5/5/03

Comments: Minor bug fixes and UI performance improvements

Release Notes:

- * Graphics rendering speed significantly improved
- * Time required to destroy modified preset editor windows significantly improved
- * Improvements to expression linking infrastructure
- * Audio Setup panel USB trims go to +24dB instead of +25
- * Minimized MDI windows no longer disappear behind status bar
- * Correct control gets the focus again after editing parameter value in the parameter value text box
- * Value in the parameter value text box is now correct when the window is activated
- * App icon now shows up in program files menu and desktop shortcuts
- * Handles the case where the default preset file (for New Preset command) is not found by creating a preset with all params zeroed
- * Knob indicators are better centered
- * Fixed a bug causing expression display values to save incorrectly
- * Added stylesheet reference to preset files for web browser display
- * Current selection auto-scrolls to be visible in library tree

Version 1.1

Build: 1251

Developer: Josh Kapp

Release date: 6/5/03

Comments: Support for Vx400

Release Notes:

- * Added support for Vx400 firmware version 1.0
- * Editing of multiple simultaneous devices is supported
- * Added device backup and restore (bulk dump) capability for all supported devices

Version 1.2

Build: 1594

Developer: Josh Kapp

Release date: 5/13/04

Comments: Support for GNX4

Release Notes:

- * Now requires Microsoft .NET framework version 1.1
- * Added support for GNX4 firmware version 1.0
- * Improved graphics for RPx400 and Vx400 editors Version 1.21 Build: 1609

Developer: Josh Kapp

Release date: 5/28/04

Comments: Various bug fixes and improvements

Release Notes:

- * Fixed a bug causing communications corruption when sending data from a connected device (e.g., expression pedal) while simultaneously sending data from X-Edit
- * Improved handling of asynchronous communication exceptions to be more user friendly
- * Fixed a bug causing Preset Level parameter to be omitted from preset save to file routine
- * Corrected units in some GNX4 detune and reverb parameter displays
- * Illegal characters are now filtered from preset file names
- * Fixed bug causing GeNetX pane to activate when a preset is stored while effects pane is active
- * Addressed several graphics issues related to large font mode compatibility

Version 1.3

RTM Build: 1.30.2034.27327

Developer: Josh Kapp

Release date: 7/27/2005

Comments: Added support for GNX3000, improved functionality and bug fixes

Release Notes:

- * Added GNX3000 document, preset, device and UI classes.
- * Fixed memory access violation causing C++ runtime library crash on XP SP2
- * Updated and added amp and cabinet names
- * Fixed access violation in communication DLL causing app to crash when corrupt MIDI messages were received
- * Improved control hilighting for focused and mouse-over (hot) states
- * Fixed bug in GNX4 and GNX3000 preset editors causing green amp channel to be shown selected regardless of actual channel selection
- * Fixed a bug causing text entry in parameter value text box to not update correctly when the active parameter's control doesn't have the focus
- * Made parameter value text box left edge stick to parameter name right edge for better readability
- * New ultra-sexy splash screen with disclaimer
- * X-Edit icon now shows correctly for Desktop and Programs menu shortcuts
- * Fixed version display in about dialog to account for GNX3 and RPx400 issues and updated to display firmware prerelease versions correctly
- * Lot's of minor graphics tweaks for focused and mouse-over control images for RPx400, Vx400, GNX4 and GNX3000
- * Expression min/max controls are now disabled when their corresponding assignment is set to no link (for all supported products)
- * Parameter displays and text entry now works for all supported products (was broken on RPX and VX in earlier beta releases)
- * About box now displays firmware versions for all products correctly
- * Fixed a bug causing mouse buttons other than the left button to actuate the button w/o giving focus. Actuation no longer occurs.
- * Fixed a bug causing the horizontal slider to track the mouse position incorrectly.
- * Windows common controls (tree view, buttons, etc) are now rendered with XP visual styles for machines with

themes turned on

* Fixed code related to dirty flags in presets and documents. If the preset becomes dirty the document is dirty too. Saving clears only the document's dirty flag. Storing clears both.

* Fixed graphic for 3-position knobs (mod waveforms and compressor attack) for GNX3000GNX4

Version 1.31

RTM Build: 1.31.2109.17950

Developer: Josh Kapp

Release date: 10/10/2005

Comments: Improved functionality and bug fixes for multiple units

Release Notes:

Version 2.0

RTM Build: 2.0.2482.24487

Developers: Paul Faby, Josh Kapp

Release date: 10/18/2006

Comments: RP150 and RP250 support and primary UI redesign

Release Notes:

* Added docking windows support and rebuilt librarian window to use it

* Added modern toolbar and menu bar

* Added RP150 and RP250 device, preset, document and editor UI classes

* Added support for multiple simultaneous devices (and virtual devices) via tabbed UI pages

Version 2.1

RTM Build: 2.0.2482.24487

Developers: Ryan Clifford, Josh Kapp

Release date: 10/18/2006

Comments: RP150 and 350 support and modern user interface design

Release Notes:

* Added RP150 and 350device, preset, document and editor UI classes

* Fixed various minor issues with RP250 editor

Version 2.2

RTM Build: 2.2.0.14

Developers: Ryan Clifford, Josh Kapp

Release date: 10/18/2006

Comments: GSP1101 support

Release Notes:

* Added GSP1101 device, preset, document and editor UI classes

* Fixed various minor issues with RP150, RP250 and RP350 editors

* Provided partial updates to RPx400, Vx400, GNX3000 and GNX4 editors for modern docking interface

* Added Windows Vista support for GSP1101 and partial support for earlier products

Version 2.3

RTM Build: 2.3.0.6

Developers: Ryan Clifford, Josh Kapp

Release date: 10/8/2007

Comments: Full Windows Vista support and enhanced librarian functionality

Release Notes:

* Various updates and tweaks for Windows Vista

- * Added drag/drop and copy/cut/paste to librarian (drag/drop requires firmware updates for RPx400, Vx400, GNX3000 and GNX4)
- * Added edit menu
- * Fixed minor issues with control focus and window activation

Version 2.4.1

RTM Build: 2.4.1.10

Developers: Ryan Clifford, Josh Kapp

Release date: 4/16/2008

Summary: Bug fixes

Release Notes:

- * Fixed issue with window location not being remembered between application instantiations
- * Fixed issue with presets not being accurate after restoring a backup to a unit
