

Tech Note

RUSH Blinder 1 WW Firmware

Before you start using your new Martin™ product, we recommend that you check that the product is running the latest firmware 1.6 or newer.

Martin™ revise product firmware each time we can make improvements or add features. To get the best performance from your product, we recommend that you check the support page for your product on the Martin™ website at www.martin.com when the product is new and from time to time during the product's lifetime. If a new firmware version becomes available, update your product following the instructions in the product's user documentation.

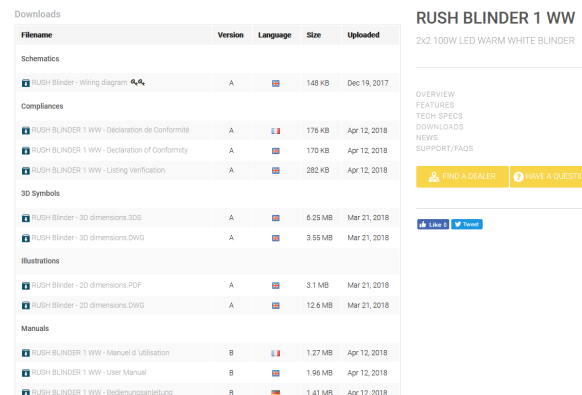

Martin™ firmware are available in the Martin Companion software and user documentation are available on the Martin™ website.

How to check firmware version?

On the fixture, press the menu button.

- Select "Information"
- Navigate to "Firmware version"
- Press Enter.

Update the fixture's firmware using **Martin Companion ver. 1.1 or newer**.
