Quick-Mount® Fixed-Angle Bracket for 8330A and 8340A

Professional Series

Key Features:

- Cost-effective wall-mount bracket
- Designed for 8330A and 8340A surrounds
- Packed two brackets to a carton

The 2516 Quick-Mount® Fixed-Angle Bracket is a cost-effective means of safely and securely securing JBL's 8330A or 8340A surround speaker to a wall surface.

To install, simply fasten the square wall-mount half to the wall and the angled speaker mount half to the rear of the speaker. Slide the speaker over the wall-mount half and secure the top flanges together.

JBL continually engages in research related to product improvement. Some materials, production methods and design refinements are introduced into existing products without notice as a routine expression of that philosophy. For this reason, any current JBL product may differ in some respect from its published description, but will always equal or exceed the original design specifications unless otherwise stated.
